

CONFIG MANAGER INTRODUCTION

Course Overview

ConfigManager is AMPAC's configuration tool that is used to program the FireFinder FACP. Participants are introduced to this program by observing the various features that will be demonstrated on this course. An overview of all the features will be presented here.

Prerequisites

An appreciation of the Fire Finder FACP and the Addressable / Analogue devices used with this panel

Key Topics

- Creating a new project
- Using functions
- Demonstrating the operation of the program

Methodology

Group instruction and discussion, visual aids and comprehensive course documentation

Expected Outcome

At the completion of the course participants will have:

- A clear understanding of all of the features of ConfigManager
- Be able to create and modify programs
- Be able to upload and download software into a FireFinder panel
