

FIREFINDER INTRODUCTION

Course Overview

This course provides an introduction to FireFinder and all of its individual features. Participants will have the operation of the panel and all of the features explained and demonstrated to them.

Prerequisites

Completion of the Addressable / Analogue devices course.

Key Topics

- Panel Design
- Front panel operation
- Panel Features
- AMPAC Devices
- ConfigManager (Overview)

Methodology

Group instruction and discussion, hands on practical exercise, visual aids and comprehensive course documentation.

Expected Outcome

At the completion of the course participants will be expected to be able to:

- Understand the operation the FireFinder FACP
- Appreciate how to modify the program from the front panel.
- Know how to interrogate field devices and panel I/O.
- Operate the FireFinder
- Have a clear understanding of the functions available on the panel
