

Fire detection and evacuation solutions that save lives.

Wagner Air Flow Reducers & Tape

Marking Tape

The Marking Tape is applied over the top of the Reducer Film wrapping around the pipe and securing it in place.

This also marks the point with red stripes for sampling point identification.

Aspiration Reducer Films

Reducer Film sampling points are applied to a larger hole drilled into the MASD pipe.

Their sizes match the range specified in the Wagner MASD Planning Manuals and software (e.g. MAN3046, PipeXpress) for balanced and flexible detection planning.

The Aspiration Reducer Films provide an exact clean aperture preventing whistling during operation due to burrs.

They display the hole size for verification and maintenance and are available in light grey or white (on special application).
